

SHIRTFACED

Orientation for anyone — human or agent — opening this repository.

What this is

Shirtfaced is an Australian humour-led apparel and drinkware brand. **Shirtfaced** is a verb and a state: something you *get*, and something you get *together*. It means *that level of good time*, not *that many drinks* — the sober mate is still shirtfaced.

The premise is not a clothing brand. It is a persistent Australian social universe, and the clothing is the visible sign that someone belongs in it. See `docs/foundations/UNIVERSE_PREMISE.md`.

Three systems, and how they relate

This is the part that is easy to get wrong. Each system is documented to a high standard with an explicit scope statement that prevents it touching the others.

	System	Governs	Lives in
A	The Universe	Worlds, characters,	<code>docs/foundations/</code> , <code>studio/worlds/</code>

	System	Governs	Lives in
		photography, canon	
B	Product Design	Garments, graphics, review, approval	docs/research/
C	Channel & Campaign	Social, web, email, drops	studio/docs/stage- 2/ — currently inactive

System B explicitly does not govern System A. Read its scope statement in

SHIRTFACED_PRODUCT_DESIGN_CONSTITUTION.md before assuming a design rule applies to a photograph, or vice versa.

System C is reference-only. studio/docs/stage-2/README.md : nothing in it reaches the planning model and no code reads it.

The rule that catches everyone

A rule has no effect on generation until it lives in a world's WORLD.md under a heading listed in PLANNING_CANON_HEADINGS , and the world has been validated and imported. A section not on the allowlist is invisible to the planner.

Promotion steps are in studio/docs/stage-2/README.md . Do not add a rule to a research document and assume it is live.

Where things actually are

- **World canon:** `studio/worlds/world-01/WORLD.md` — the deepest document here. Read it first.
- **Portable rules:** `studio/docs/CARRY_FORWARD_CANON.md` — what survives into new worlds.
- **Production backlog:** `studio/worlds/world-01/SHOTLIST.md` and `CONTINUITY.md`.
- **Design constitution:** `docs/research/SHIRTFACED_PRODUCT_DESIGN_CONSTITUTION.md`.
- **The kill filter:** `docs/research/DESIGN_REVIEW_SCORECARD.md` — 12 hard-fails plus a weighted 100-point rubric. Nothing has been scored through it yet.
- **Compositing:** `studio/app/services/compositing.py` — designs are printed onto blank garments locally after generation. Deterministic, free to re-run, text stays accurate.
- **Storefront:** `src/` (Next.js) and `admin/`. Shares a repo with the studio and nothing else.

Current state — read these two first

- `docs/SYSTEM_AUDIT_2026-08-07.md` — gap analysis, scores, prioritised hot list, phased plan.
- `docs/SESSION_HANDOVER_2026-08-07.md` — decisions and open items not yet promoted to canon.

The headline finding: the thinking is far ahead of the instantiation. There is no brand

voice document, no character bible, no design has ever been run through the scorecard, and two canon documents contradict each other on camera position.

Working notes

- All generated photography and video to date is **dev work and disposable**. Do not treat existing assets or scenario banks as constraints.
- Version 1 of Shirtfaced Studio deliberately excludes ecommerce, garment mockups, automatic publishing and social integration. See `studio/AGENTS.md`.
- Generation is synchronous by decision (ADR-010). The `awaiting_decision` state exists so human approval is visible in the data. A stored image is not an approved image.
- Australian English throughout.
